NOVA SCOTIA HOSPITAL
DARTMOUTH, N.S.

--DISCHARGE REPORT--

148

NAMES PRATIOO, JOHN LOUIS

ADDRESS: 212 Henry Street
Sydney, N. S.

AGE: 17

HUSBAND'S NAME: N/A

SERVICE: In-Patient

CASE NUMBER: 72-03544

DATE OF ADMISSION: December 12, 1972

DATE OF DISCHARGE: January 23, 1973

TERMINATION OF CARE: Full Discharge

STATUS: Certified

This seventeen year old boy from Cape Breton, was admitted for the third time on December 12, 1972 as a certified patient. He was referred from the Cape Breton Mental Hospital primarily for behavior problems. He was first admitted to this hospital in October, 1971 with a diagnosis of Acute Adolescence Situational Reaction and Schizophrenia and was referred to the local mental health centre for further follow up. A month later, he was again re-admitted until March, 1972 and discharged to the Cape Breton Mental Hospital. At that time, he was diagnosed as Schizophrenia. He remained at the Cape Breton Hospital until June 13, 1972 after he began to settle down considerably on psychotropic medications. Since he was out of the hospital, John said that he wasn't doing badly, but kept on drinking, and this was three to four months after he got out of the Cape Breton Hospital.

COURSE IN THE HOSPITAL

On admission, he was quite overactive, but spoke spontaneously, coherent, relevant with no evidence of thought disorder. He admits to having a bad temper, especially when he is drinking. He was continued on Chlorpromazine, 100 mgs. t.i.d., and then increased to 150 mgs. t.i.d. along with Trihexyphenidyl, 2 mgs. o.d. He responded quite well on this dosage of the medication and continued to function fairly well to such. Then he was recommended for a transfer to the Cape Breton Mental Hospital. Since I found upon his previous admissions, the patient was presented at the unit conference and was felt that he could function outside of hospital. When this was carried out, the patient refused to return to the municipal hospital, so arrangements were made to evaluate the home situation with the father. Dr. Donovan agreed to return this patient in care of the father as it was found that things at home with the father seemed to have improved over the past year. It was also recommended that he should be followed up at the Cape Breton Mental Health Centre.

DISCHARGE DIAGNOSIS

Personality Disorder - Explosive Type
Borderline Mental Deficiency

MARSH SUMMARY

Continued.....
72-63544

RECOMMENDATIONS

1. To continue Chlorpromazine, 150 mgs. t.i.d. and Trihexyphenidyl 2 mgs. o.d.
2. Follow up at the Cape Breton Mental Health Clinic by Dr. C. Donovan and family physician, Dr. A. Guam.

Signed: E.P.B. Aquino, M.D.

PSYCHIATRIC SURVEY - December 14, 1972:

This 17 year old male from Cape Breton, was admitted for the third time on December 12, 1972 as a Certified patient. He was referred from the Cape Breton Mental Hospital primarily for behavior problems. He was there for a few days and calmed down slightly on Chlorpromazine 100 mgs., Trihexyphenidyl 2 mgs., both t.i.d. and Valium 50 mgs. IM p.r.n. His first admission to this hospital was from August - October, 1971 because of the history of anxiety and paranoid ideation along with occasional hallucinations. He was treated with chemotherapy and all other modalities of therapy on the S-3 programme. He was referred to the local Mental Health Centre for further follow-up at this time. Discharge diagnosis at that time was Acute Adolescent Situational Reaction and Schizophrenia. He was again re-admitted a month later until March, 1972 and discharged to the Cape Breton Mental Hospital. At that time he was extremely jumpy, jittery and hyperactive. He functioned only marginally on the adolescent programme, treated with large doses of phenothiazines, presented at the Unit Conference and was felt that he could not function outside of hospital. Discharge diagnosis at that time was Schizophrenia. He remained at the Cape Breton Mental Hospital until June 13, 1972 after he had settled down considerably on Thioridazine 200 mgs., Trifluoperazine 5 mgs., Benztrapine Mesylate 2 mgs., all t.i.d. with 1 IM weekly injections of Fluoperazine, 1 cc to the care of his father.

On my interview the patient stated that his problem was mostly his nerves. "I get jumpy quick. Sometimes when I go home my sister will argue and I lose my temper." He was able to recall how many times he was in this hospital and who his doctor was at that time. Since he was out of the hospital, he said he wasn't doing badly but kept on drinking and this was three to four months after he got out of the Cape Breton Hospital. "When my nerves got bad I didn't know what to do so I started drinking." Drinking apparently occurred once a week and this was when "I argue with my sister, then I start drinking."

Mental Status: He is appropriately dressed but disheveled, cooperative and comfortable with the interviewer but quite restless. He spoke spontaneously, coherent and relevant with no evidence of thought disorder. Affect is appropriate, not depressed. Sleep and appetite were not impaired. No hallucinations and when I inquired about paranoid ideations it was gathered from his referral paper that the patient was expressing frank delusions about everybody at home, he said that his sister often argued with him which made him mad. While he was in the hospital recently he said that one guy picked on one of the

Nova Scotia Hospital
CLINICAL RECORD

PRATICO, John L.

72-03444

72-03544

Page 2

retarded kids in the hospital so he protected this kid by fighting with this guy. Sensorium - He is oriented in three spheres. His memory is grossly intact. Insight - "Just my nerves, that's all."

Impression: Since the patient came into the hospital he was continued on Chlorpromazine 100 mgs. t.i.d., Trihexyphenidyl 2 mgs. t.i.d. and hasn't shown any problem other than his being quite overactive. He was socializing well, cooperative and helpful and there was no problem in management. I do not see this boy as psychotic at the present time but we will observe him further if he requires increase in his medications. After he settles down with chemotherapy, we will refer him back to the Cape Breton Mental Hospital. I have the suspicion that this boy is of low intelligence.

Tentative Diagnosis: Chronic Schizophrenia.

Recommendations:

(1) To continue Chlorpromazine 100 mgs. t.i.d. and

Trihexyphenidyl 2 mgs. t.i.d.

(2) For further observation if medications need to be increased further.

(3) To participate in ward activities.

PROGRESS NOTE - January 23, 1973

John is being discharged today to the care of his father. He was initially recommended for transfer to Cape Breton Hospital, which was approved, but after Mrs. Pelletier had talked to him about this arrangement, John was not happy returning to the Cape Breton Municipal Hospital. Cape Breton Mental Health Clinic was then contacted for evaluation of the home situation with the father in having John returned to his father. Dr. Donevan agreed to have him return to his home with his father since things seemed to have improved over the past year. Dr. Donevan also agreed to follow up this patient.

D. T. February 14, 1973

72-03444

No. 72-03544 PRATICO, John Worker: (Mrs.) Judy
Pelletier, M.S.W.

Social Service Note, January 30, 1973:

John was discharged from the hospital on January 23, 1973, en route to his home in Sydney. He was looking forward to going home, and seems to have progressed very well here on this admission. He was certainly a lot less volatile and aggressive this time.

John had originally been referred for admission to Cape Breton County Hospital. However, he did not like the idea and claimed that he had been living at home with his father and that this is where he wanted to go. John believed that life with father was fairly healthy.

I contacted Mrs. Burnette of the Family and Child Service. She was in touch with the father, and conveyed the message that father wanted John home; this was an acceptable placement in her view and father would be sending money for his transportation. I also wrote to the Mental Health Centre in Sydney, and was sent a report (which is on file) from them, giving the O.K. to John's father's home. The request for transfer to Cape Breton County Hospital then was cancelled.

Dec 12/78 (1630 hrs)

Cat 3rd, 12 yrs old w/m p/d
admitted ambulatory to S-4. Prev. Diag 'schizophrenia'
Distractive or sane. Continually
twisting during interview.

Start he was admitted to
Capr. Carter hospital because he was
delicting shaving twice & subling alcohol.
This pastime he stated used to be fun
but it isn't anymore. "it has had consequences
you know" then completely changes the
subject & stated "I haven't eaten anything
in ages".

Running around now, getting
around & familiarizing himself to new
area p/d. In opposition to doctor's
previous statement he is a good boy

AP 120
(630-2700) Sociotherapy well, he is
& helpful around. Told you, he is
easy.

Jan-25 (cont)

John carries out his ward duty well.
He appears to be concerned about his
return to Coco Point Hospital. He is
presently having less or none in his
medications.

Jan-11-72. John's behavior seems more
to be Sano. He has been going to his
work placement regularly. His
medications were missed yesterday and
he was very sleepy today. He seemed
very disinterested in work activity today.
John Poston is still very withdrawn
and is very hostile around the ward.

Jan-12-72.

John's behavior seems more withdrawn. Today
he was seen causing some minor
disturbance in the hall. He was still
work placement with no participation.
Still very hostile around the ward.

TRANSFER NOTE

NAME: PRATICO, John

DATE OF TRANSFER: December 12, 1972

This patient was transferred to this hospital from the Nova Scotia Hospital on March 29, 1972 after he was treated for his schizophrenic illness. He was discharged from this hospital on June 13, 1972 after he had settled down considerably on Thioridazine 200 mgs., Trifluoperazine 5 mgs. Benztropine Mesylate 2 mgs.; all t.i.d. with I/M weekly injections of Fluoperazine 1 c.c., to the care of his father.

On the evening of December 7, 1972, he was brought to the hospital by the police when he was shouting, aggressive, restless and unmanageable. On the ward, he started hitting the patients without any reason and was expressing frank delusions against everybody at home. In addition, he was drinking liquor; almost anything he could get, including shaving lotion, etc. He also has some family problems-- his father is living with another woman and his mother is living with another man and there is nobody at home to identify with. He has no work record and there are some financial hardships as well. He is more of a behaviour problem than anything else. He has calmed down slightly on the following medication: Chlorpromazine 100 mgs., Trihexyphenydyl 2 mgs. both t.i.d. with Valium 50 mgs. I/M p.r.n.

Thank you very much for accepting this patient.

Signed,

M. Habib

M. Habib, M.D., D.P.M., M.R.C. Psychiat.

Mrs. Judy Pelletier, M. S. W.
Social Service Department
Nova Scotia Hospital
Dartmouth, N. S.

Dear Mrs. Pelletier:

RE: John Pratico (age 18)
212 Henry Street
Sydney, N. S.

723544
Thank you for your letter about the captionally named who is presently in your hospital.

I feel that it would be all right for him to return to his home with his father. Things seem to have improved over the past year. He stopped coming to see us at the clinic following an altercation he had with us about having to pay for his drugs. It was a paranoid misunderstanding but it would be helpful if prior to discharge it would be pointed out to him that since he will soon be 18 and in receipt of Provincial Social Assistance he will be expected to pay for his drugs at the clinic. We sell them at about a sixth of the cost.

Yours sincerely,

C. Donovan /bc

-- DISCHARGE REPORT --

#148

NAME: PRATICO, John L.

ADDRESS: 301 MINTINCK ST.
SYDNEY, N.S.

AGE: 16

EMPLOYER'S NAME: N/A

SERVICE: IN-PATIENT

CASE NUMBER: 71-03131

DATE OF ADMISSION: NOVEMBER 29, 1971

DATE OF DISCHARGE: MARCH 29, 1972

DISCHARGE DISPOSITION: FULL DISCHARGE TRANS.

TO: TO CAPE BRETON COUNTY
HOSPITAL: HOSPITAL

STATUS: CERTIFIED

This patient has had two admissions to the Nova Scotia Hospital for treatment of schizophrenia. On admission he was extremely jumpy, jittery and hyperactive.

While in hospital patient functioned only marginally on the adolescent programme and was treated with large doses of phenothiazines. He was presented at our Unit Conference on February 24, 1972 and at that time it was felt that he could not function outside of hospital. It was therefore recommended that he be transferred to a Municipal Mental Hospital.

DIAGNOSIS: Schizophrenia.

RECOMMENDATIONS: At present patient is receiving Mellaril 200 mgm. q.i.d., Stelazine 5 mgm. t.i.d. and Cogentin 2 mgm. t.i.d.

He is being transferred to the Cape Breton County Hospital and should continue on the above medication.

for P.H.Bentley MD
Dr. P.K. John, M.B.B.S., F.R.C.P.(C)
Senior Psychiatrist.

(FORM A)
NOVA SCOTIA HOSPITAL
STATEMENT

The information asked for in the following questions should be given as fully as possible, going into careful detail in each instance. This is desired because it becomes a part of the patient's case-record after admission to the hospital, and it may be of the greatest assistance to the hospital staff in deciding upon the treatment to be followed. It would be well to have the attending physician assist in the preparation of the statement, if practicable.

Before any person is forwarded for admission to the Hospital by medical certificates, a statement of particulars in Form A of the Schedule, and two medical certificates in Form B of the Schedule shall be furnished to the Superintendent and his answer and approval shall be received.

1. NAME IN FULL John Louis Kidstoo

2. RESIDENCE 201 Pleasant St Sydney BIRTHPLACE Sydney

3. AGE 14 BIRTHDAY AND YEAR Dec 31, 1957 RELIGION R.C.

4. SINGLE, MARRIED, WIDOWED OR DIVORCED

FAMILY HISTORY

5. NAME OF FATHER George RESIDENCE Port Columbia

6. MOTHER'S MAIDEN NAME Hawco BIRTHPLACE Sydney

7. If either of the patient's parents is dead, state age at death and cause of death

8. Is there any degree of relationship between the patient's parents? Abs If so, state fully

9. How many brothers and sisters does the patient now have? 2 16 yrs old

10. How many brothers and sisters are dead? 0 Age and cause of death

11. If any of the relatives have been treated in a hospital for syphilis or other disease of the nervous system or insanity, state what hospital or clinic, and the name of the patient so treated.

PERSONAL HISTORY

How many children has patient had?

(b) If they are deceased, give age at death and cause of death.

(a) Their ages, if living.

12. Was the patient as an infant and young child healthy, strong and well developed or otherwise? YES
State exceptions.

14. At what age did the patient walk? Talk? Go to school?

15. Did patient learn readily? Yes

16. What diseases of infancy and childhood had the patient had? Measles, mumps, chicken pox.

17. Has the patient ever suffered from any mental or nervous disease (nervous exhaustion, paralysis, epilepsy, hysteria, chorea, tic or habit spasm, head injury or serious accident)? State particulars fully in each case, giving age at which injury or condition occurred, and name of hospital treated in if any.

18. Has the patient ever suffered from tuberculosis, scrofula, or chronic rheumatism, gout, eczema, kidney disease, diabetes, cancer, heart disease, syphilis, rickets, pneumonia, typhoid fever, or any infectious disease?

19. What have been the patient's habits as to the use of: (a) alcoholic stimulants, (b) narcotic drugs, opium, etc?

Drank to excess on occasions

72-03444

HISTORY OF PRESENT ATTACK

20. Was there any change in character and disposition previous to the present mental change and when did such change first appear?

Progressive

21. What were the first mental symptoms observed (a) Depression or excitement (b) Inertia or restlessness (c) talkativeness or redience (d) obstructiveness or obstinacy (e) irritability, impulsion or the contrary (f) loss of memory (g) defects in judgment (h) confusion or (i) self-accusation?

22. Have the mental changes been ~~(progressive and regular)~~ or have they suddenly varied; the patient at times speaking more ~~less~~ ~~or the contrary~~?

23. What are the changes which have taken place in patient's mental and physical symptoms since the commencement of the attack?

Note particularly any delusions (false ideas) or hallucinations (perversion of the sense of sight, hearing, etc.) which the patient has had. It is important that changes in manner, habits and ideas which have occurred be stated, and as fully as possible. Note any change in speech, habitual or frequent repetition of the same word or phrase, disturbance of vision, alternation of handwriting, difficulty of walking or change of gait, faint or loss of consciousness, convulsive attacks, paralysis in any form, impairment of any muscle or set of muscles or any twitching of limb or single muscle or habitual movements or attitudes?

24. Has suicide or violence to others been threatened or attempted? If so, in what way?

25. State fully any other facts bearing on the course of the patient's past or present history.

26. What physicians have seen the patient during the attack? Give name and address of each physician.

72 Q344

21. Name, post office and telephone address of relative or friend to whom letter copy of the warrant of admission can be sent.

22. Person giving above history sign name and full address, for this purpose:

John Margaret Masters ... nearly due to the time
of my knowledge the foregoing particulars are correctly stated and I hereby request that the above named
John Margaret Masters ...
when I saw at

day of (being within fourteen days from the date)
Be received as a patient into the Nova Scotia Hospital

Degree of relationship if any of person giving

If not signed by a husband or wife or relative of the patient, give the reason why the statement is not so signed, and the connection of the person who is giving the statement with the patient.

Clinical Condition (including ILPI, Drug and food allergies)

The patient was here from 25/8/71 to 26/10/71 with schizophrenia. He was on EPZ 300 mgm g.i.d. When released at his own request, he was to carry on with the Sydney Mental Health Center and to take haloperidol and clorazepate.

The re-admission certificate notes that he is incoherent, feels that people are after him, fears and persecutes continually.

In admitting, he lounge in his chair - says he started drinking, fighting with his mother. Doctor said he had feelings that people were after him.

He says he was on EPZ 100 mgm po 3/32 after one visit to Dr. Donovan. He was given a return date but Provisional Diagnosis didn't go. Stopped his EPZ immediately because no EPZ prior.

(4) patient

Has a Credit Card been issued?

Admission Orders (valid for 24 hours only, over a weekend will next regular working day.)

EPZ 100 mgm g.i.d. (He does the work required to do you at home)

PSYCHIATRIC SURVEY November 29, 1971SITUATION, COMPLAINT & PROBLEM:

This patient was in the Nova Scotia Hospital Adolescent Program, from 25/8/71 to 25/10/71 with the diagnosis of schizophrenia. He was discharged on Chlorpromazine 200 mg. q.i.d. and referred to a local psychiatrist. He has been doing poorly during the last few days and the family doctor has requested a readmission.

HISTORY OF PRESENT ILLNESS:

It would appear that John has not been taking his medication and not keeping his appointments with Dr. Donovan. He has been having quite a few battles with his mother and it appears that there have also been threats at each other. The situation became rapidly out of control. Mother approached the family doctor who certified him and returned him to the hospital.

PAST HISTORY & FAMILY HISTORY:

This is available in his previous records and will not be repeated.

MENTAL STATUS EXAMINATION:

This shows a very hyperactive, jumpy, jittery male who is walking around rapidly from end to end of the ward. It is difficult to reason with him or carry on an organized conversation with him because he is argumentative and somewhat hostile. He seems to be also putting on quite a dramatic show to impress the staff and the patients. He made statements that he does not need to be in hospital. He uses vulgarities lavishly. He seems to be in good contact with reality. His sensorium appears normal. He shows no disorientation. His thinking seems to be clear. There is no evidence of delusions or hallucinations. He says the main reason why he is in hospital is because of his "mother". He claimed that his mother has called the police after him. He also admits that he threatened to break the broomstick on her back. He states that his mother has been making similar threats towards him. He says that he has been doing a considerable amount of drinking, mostly rum and wine. He said that the trial of the Indian boy, about which he was worried on his last admission, is over with. The man was apparently sentenced and sent to Dorchester. John himself was a witness at the trial.

DIAGNOSTIC IMPRESSION, INVESTIGATION & TREATMENT PLAN:

This then would appear to be a rather hyperactive and somewhat hostile young man who was previously admitted with a diagnosis

of schizophrenia. He does not appear to be overtly psychotic but more hypomanic at the present time. He needs to be observed further with a large amount of medication. He is accordingly being placed on liquid Largactil 150 mg. q.i.d. If he is unable to function on the open ward 8-3, he will be returned to 8-4.

PROGRESS NOTE - NOVEMBER 30, 1971.

This patient arrived as a second admission. He is extremely jumpy, jittery and hyperactive. He is being treated with a large dose of phenothiazines. He is functioning marginally on the adolescent programme at the present time. He does not appear to be psychotic as reported by the family doctor, who referred him.

OCCUPATIONAL THERAPY PROGRESS NOTES

John Pratice
16

DATE

Mar. 2/72:

John doesn't attend the department but does have a work placement job he enjoys very much. Before he was on work placement he managed to start at least one argument whenever he came to the department. He constantly asked staff to give or lend him something, or do something for him that he knew we didn't do for the others. He has a habit of forcibly restraining other patients (over nothing), and because of this and his bad language, we are worried about taking him places where he will be with strangers who don't know him and how explosive he can be.

When in the department his concentration and coordination are both so bad that he tries all the time to get others to work for him. He teases the others but the general attitude seems to be that he can do it, but it better not happen to him.

H. Lucas, O.T.A.

Jan. 21/72

Patient seemed to have settled down during remainder of the week. Having signs of paranoia (stating that other patients are talking and laughing at him.) Remains on work placement. Complain of one night being on night-end pass on Saturday. Poor appetite.

Follow up P.N.O.

Feb. 5/72

John DeBarre has been unpredictable for the past couple of weeks. One of his biggest disappointments was the failure of the "possible foiler placement". John was very upset for a couple of days because of this. Several birds kept popping up afterwards. A few of the younger cockatoos from John's bird park had climbed onto the kitchen floor. Also on a few occasions the pets had eggs in the beds which John was very "uncomfortable & shifty". Lately John's language has been rather coarse & he is peppered by swear words. His birds are done extremely well. Appetite good.

Feb. 13/72

John ~~still~~ remains to give the outline of a jump, biting, hypochondriac male. Received the first part of the week. John became quite upset & hostile. Apparently other fellow pts (female) were tormenting John by placing an object on his bed & then trying to kick it off while John was resting. This incident was brought up at the regular evening meeting & John became explosive. First he was going to pick up a chair & throw at one of the culprits, who was involved, but on second thought John put the chair down with some difficulty, as if the two, gradually and gave her a little bit of a shake up. To John this had gone well, because it had been dissolved by anger since his feelings were received by both patient and accompanying John - this the best of patients know.

See Dr medical D. this week. Because of all my O's in body. Origin of allergy unknown. Hypothetical & hypoglycemic form.

Feb 21/72 - Not getting along well as of 3.
Disobeying rules of the ward at times. Hyperventilating and talking at times. Inappropriate religious nature. The prangs stop if he was taken in constantly. Very explosive when upset over little things. Profane language used frequently. Personal hygiene good. Very helpful in ward duties. Friend No 54. Wasayka.

Feb 24/72. Appears to be venting things looking for something to do. Enjoying of work in rooms and sign. Hygiene has to be encouraged. Gentle guidance.

Mar 5/72. appears to be still restless as of 3. always looking for something to do. Very helpful in ward duties. Still has a tendency to chat personal topics.

P. K. John, M.D.
Adolescent Ward
Adolescent Unit
Nova Scotia Hospital
Dartmouth, N.S.

Dear Doctor John:

Re: John Practico
201 Bentinck Street
Sydney, N.S.

On visiting the above patient's residence, which is sub-standard, I learned that his parents are separated and the patient lives with his mother and small sister, age five years. Mrs. Practico appears to be unstable and may tend to be vindictive against John because of past closeness with his father. This closeness apparently ended when his father went to live with another woman, who would not allow John to live with them. This situation was related to me by Family Court case worker, Mr. Stanley Reppa.

John's twin sister lives with Mr. Practico and his common-law wife, out of necessity. John apparently has beaten and threatened her.

Mrs. Practico states that John often sat at the table and cried because of pains in his head and had episodes where he shouted and screamed at her. On one occasion in the past he attempted suicide.

In conclusion, I feel the pressure brought on by an unsatisfactory relationship with his mother plus a recent murder trial, in which John was a key witness, may be more than he could cope with, as he stopped taking his medications and apparently started drinking. This situation may have compounded his frustrations and fears and he threatened his mother's life and was returned to the hospital.

The Family Court case worker, Mr. Stanley Reppa and their family physician, Doctor William Snow, feel that Mrs. Practico is unstable and is unable to give John a home atmosphere which is conducive for

his future mental health. Apparently, Mrs. Practice has refused personal help for herself.

John did attend the Cape Breton Mental Health Clinic and maybe Doctor Donaovan can give you more information re John.

Yours sincerely,

Marion Stewart

NAME: PRINTER, John

ADDRESS: 202 Bentinck Street,
Sydney, N.S.

AGE: 26

HUSBAND'S NAME: N/A

SERVICE *as Patient*

CASE NUMBER: 72-02158

DATE OF ADMISSION: August 25, 1971

DATE OF DISCHARGE: October 25, 1971

~~INPATIENT/PATIENT~~ FULL DISCHARGE

STATUS: VOLUNTARY

This young man was admitted from the Cape Breton area with a history of anxiety and paranoid ideation, along with occasional hallucinations. He participated well on the Adolescent Program and he was treated with chemotherapy and all other modalities of therapy on the S-3 Program. He is stabilized well and he has requested a prolonged visit with his mother. This has been granted and it is felt that he should be referred to the Central Mental Health Centre for further follow-up at this time. Patient is being formally discharged. He should continue on a course of Largactil and Trileptal, in appropriate dosages considered by the local physician.

SAME ADDRESS

SYDNEY CITY

DR. ABE GAUM

(Clinical Condition (Including H.P.I., Drug and food allergies)

16 year old who has come from a broken home and his mother took custody of him in March 71. He has been a behaviour problem (slamming doors, threatening mother, temper tantrums). She had to take him to family court 3 months ago and he was placed on parole bond. He tends to fly off the handle for no reason.

He was witness to a murder (mauldaughed) in May 1971 which made his behaviour worse. Last Monday he locked her bedroom door so she had to call the police to get him to open it.

P.P.H. Inguinal Hernia repair. Great elation.

F.P. Aunt was here. Mother had diabetes.

Provisional Diagnosis: Behaviour disorder.

Has a Caution Card been issued?

Admission Orders (valid for 24 hours only, over a weekend until next regular working day)

Placing straight I.O. pm.

M.A. The father & mother separated in 1966 - the father took the boy. The boy left his father this last March following a hearing. He took an overdose of pills a month ago.

Admitted by T. Thorpe

DARTMOUTH, N. S.

I, the undersigned, make application for admission to the Nova Scotia Hospital as a Voluntary Patient. I agree to abide by the rules and regulations of the Institution.

I also agree to give the Medical Officer in charge three days notice in writing of my desire or intention to leave the Hospital.

Mrs Margaret Pratice
SIGNED..*Mr John L. Pratice*

PSYCHIATRIC SURVEY - AUGUST 31, 1971:

SITUATION, COMPLAINT & PROBLEM:

This 16 year old boy was admitted from Sydney as a voluntary patient on a referral from Dr. Guam. Information was meagre. However, the situation was clarified by an interview with John and his mother. It would appear that this boy was nervous and high strung for several months prior to his arrival here. He was looked after by a local psychiatrist in Sydney Mental Health Centre. He was treated essentially with medication. More recently the situation became unmanageable and the family approached Dr. Guam who referred him here. However, I note that no previous arrangement was made for his admission and he came as a surprise to us when the family arrived here.

HISTORY OF PRESENT ILLNESS:

The boy comes from a very disturbed family. Parents have been split up. Mother has a serious drinking problem. Father has been known to be violent towards his wife and children. He is living or going with another woman now. John is one of a pair of twins. The other one is a girl. She lives with her father now. John has a great deal of difficulty getting along with this twin sister. He also gets into quite difficult situations with his own mother. Mother claims that John has been violent physically at times towards her but he states that this is because of her drinking and inability to keep the house and inability to provide meals.

PAST HISTORY & FAMILY HISTORY:

The father left about 5 years ago. There were repeated arguements between the parents. The twin girl lives with the father in Whitney and there is a young child in the family who John claims is from another man with whom his mother was going.

MENTAL STATUS EXAMINATION:

This shows a very anxious, jumpy, jittery 16 year old boy. He seems to be quite frightened and scared and quite happy to be in the hospital. He stated that on top of all his problems he has got himself into a tight spot by witnessing a murder in the park not too long ago. He is one of the only 2 witnesses in this murder trial and there have been some threats on his life. This has not made matters easy for him. He has also stated that there are some racial overtones in this murder trial because the boy who was murdered was a negro lad and the murderer (alleged) was an Indian boy. It seems that the whole Indian Tribe in the local area considers him as an enemy and

Nova Scotia Hospital
CLINICAL RECORD

72-03444

Page 2

PRATICO, John L.

71-02158

would like to liquidate him. John, in addition, seems to have had hallucinatory experiences. He hears voices and he sees flashes of light. He denies a history of drug abuse. There is no other overt dysfunction of thinking or thought processes other than hallucinations. Whether he is somewhat paranoid about his fears of his own life is not quite clear at the present time. Judgement and reality testing are impaired at an operational level.

DIAGNOSTIC IMPRESSION, INVESTIGATION & TREATMENT PLAN:

This would appear to be a 16 year old boy who seems to have some kind of an acute situational reaction. However, the presence of vague bizarre symptoms for a number of months, the presence of hallucinations, and the possibility of paranoid ideation, also points the finger towards a diagnosis of adolescent schizophrenia. Diagnosis will be clarified by further observation on S-3. In the meantime he will take part in all treatment on this ward and he will also be treated with a heavy dose of phenothiazines.

PROGRESS NOTE

SEPT. /21

This boy has stabilized remarkably well on medication. He is participating very well in group programs, and she can be discharged except for the ~~strange~~ home situation. The possibility of placing him in a group home will be explored with the help of a social worker.

No. 71-02158 PRATICO, John Workers (Mrs.) W.M.Milne, M.D.

Social Service Note, September 23, 1971:

This young man has improved considerably since coming to hospital. He has settled down to the point where we can now consider making some discharge plan for him. Accordingly, we arranged to send him on a two week pass home.

John became anxious, nervous and irritable, and finally decided he was not ready to try a pass home as yet. We have had several contacts with Mrs. Pratico and it appears that she is not prepared to consider the possibility of placement of this boy outside the home. She is receiving financial assistance from her husband on behalf of John and is somewhat concerned that her financial circumstances will change if John were removed from the home.

John, himself, appears not to be able to cope very well with the pressures of home, but, when confronted by his mother, relented and agreed to stay with her. However, as mentioned, when he was offered a two week pass home, he decided that he couldn't cope and elected to remain in hospital.

Mrs. Pratico is quite depressed, anxious, and quick to react to John's moods. In short, I think we have a "cause-effect type of relationship here which probably will not make for a good adjustment for the patient if he returns home.

Moreover, the impending pressures of the Court Hearing (scheduled for sometime in October) seem to be causing John some increasing anxiety. I have discussed this case with Peter MacDonald of the Family Court in Sydney (telephone 539-4070) and he is to investigate the possibility of firming up some discharge plan for John back into the community. He will advise us what supportive community resources are available there if John should return home. He is to contact Doctor John regarding this situation.

SLOW. 8-9

Sept. 14/71

RECORD DESCRIPTION: The resting record is symmetrical. There is quite well regulated 9-10/second alpha activity. There is slight 5-7/second fronto-temporal dysrhythmic activity which is increased during hyperventilation. There are no focal or paroxysmal discharges. No further abnormalities develop with photic stimulation.

CONCLUSION: The EEG shows non-specific and non-diagnostic fronto-temporal dysrhythmia but this is not uncommon in schizophrenia. There is no evidence of any focal cerebral pathology.

John comes from a unfavorable family situation. Mother is a very heavy drinker and live on Social Assistance and lives with a "Alcoholie" boy friend. Father has departed and lives in another women. John describes himself as a nervous high strung " nail biting" individual not to bright in school. He has repeated grade 5 6 & 7 not being able to study in the home situation. John and his mother fight and argue often mostly about the mothers drinking. He has times taken from Slammer doors, the attorney, Maths and such. He was also picked up for shop lifting but was not charged. He was a witness to a murder (house broken) in May 1921 and since then he admits to be getting worse.

SAME ADDRESS
DR. ABE GAUM SYDNEY CITY

Sept 27/71. Pt gets along well on ward. He does his ward duties well and is able to help the girls in the kitchen. He gets a little overactive at times. He likes to help the staff on the ward. Personal hygiene and eating habits good.

R. Duncett

Oct 9/71 Behavior remains good. Medications obeyed well. attends all ward functions punctually. appetite good. Hygiene & grooming appears somewhat slow in actions. Dull facies.

C. Taylor

Oct 25/71 (in pass since Oct 10/71)

Discharged as of 10:00 hrs Oct 25/71. Discharge by 3

4410 Revised Jan. 172
